

Magnetic Compass Find

Directions

- Let your child color the compass, then cut out. Glue a magnet onto the back of the compass.
- Explain to your child that a compass uses a magnet to point north, which can help us find our way when we get lost.
- Have your child take the compass and search around the house for things that the magnet is attracted to. In the chart help your child write what things are magnetized and what things are not.

Materials

magnet
glue
